

Walnut Canyon National Monument Vegetation Map Class for Limestone Rim Complex

The map class "[Limestone Rim Complex](#)" is composed of the following vegetation associations, each described separately:

- [Pinus edulis - \(Juniperus spp.\) / Cercocarpus montanus Woodland](#)
- [Pinus edulis - \(Juniperus osteosperma\) / Purshia stansburiana Woodland](#)
- [Pinus edulis - \(Juniperus osteosperma\) / Bouteloua gracilis Woodland](#)
- [Chamaebatiaria millefolium - \(Mahonia fremontii\) - Yucca baccata Limestone Terrace Shrubland \(Proposed\)](#)

This complex of woodland, shrubland, and sparse plant associations occurs on south, east, and west-facing canyon slopes in Walnut Canyon. It also occurs on north-facing slopes in the lower part of Walnut Canyon where the canyon is wider and the walls are less steep.
